Homework #3

Nathaniel Haulk

10/14/2021

Question 1

[1,] 0.4577936 0.5193423 0.4856413

```
set.seed(12) # to be reproducible
## Creates a 50 x 10 matrix with the values 1-500
A = matrix(data = runif(n = 1:500), nrow = 50, ncol = 10)
## Adds column names with lake and a number separated with a "\_"
colnames(A) = paste("lake", 1:10, sep = "_")
## Calculating Average using for loop
## Creates a matrix to record means in
AloopMeans = matrix(data = 0, nrow = 1, ncol = 10)
## Adds column names with lake and a number separated with a "_"
colnames(AloopMeans) = paste("lake", 1:10, sep = "_")
## for loop to run through each column and calculate the mean.
for(i in 1:ncol(A)){
 AloopMeans[i] = sum(A[,i])/NROW(A[,i])
## Print means generated using the for loop
print(AloopMeans)
##
                            lake_3
                                     lake_4
          lake_1
                   lake_2
                                              lake_5
                                                        lake_6
## [1,] 0.4601492 0.4992815 0.5987037 0.4580486 0.4719578 0.4965216 0.5110536
          lake_8
                   lake_9
                           lake_10
```

```
######################################
## Using colMeans
## Records Average from colMeans
AcolMeans = colMeans(A)
## Prints Averages from colMeans
print(AcolMeans)
                       lake_3
                                 lake_4
                                          lake_5
                                                   lake_6
     lake_1
              lake_2
                                                            lake_7
## 0.4601492 0.4992815 0.5987037 0.4580486 0.4719578 0.4965216 0.5110536 0.4577936
     lake 9
             lake 10
## 0.5193423 0.4856413
```

Question 2

```
x = array(1:27, dim = c(3, 3, 3))

## Used to record each number as character

x.ap = NULL

for(i in 1:dim(x)[1]){
    for(q in 1:dim(x)[2]){
        x.char = NULL
        for(u in 1:dim(x)[3]){
            x.char = cbind(x.char,as.character(x[i,q,u]))
        }
        # x.ap[i,q] =
    }
}
```

Question 3

```
## How many numbers of the Fibonacci Sequence you want to generate.
fib.length = 30

## Makes a list of 30 elements all set to 0.
Fib.seq = matrix(0, ncol = 1, nrow=fib.length)

## Sets the second term of the matrix to 1.
Fib.seq[2] = 1

## For loop to calcuate sum of previous two values.
for (i in 3:fib.length){
   Fib.seq[i] = Fib.seq[i-1] + Fib.seq[i-2]
```

```
} # Closes for loop

## Prints out the first 30 terms of the Fibonacci Sequence.
print(Fib.seq)
```

```
